DATA SCIENTIST

Wake Forest MSBA candidate with a Computer Science foundation and minors in Mathematics and Psychology, focused on building predictive models from raw data through feature engineering, validation, and interpretation. Developed regression and neural network models in Python and PyTorch, including a Nashville Airbnb price model and a live NBA/WNBA prediction pipeline. Brings the statistical rigor and communication skills to turn model findings into decisions people can act on.

EDUCATION

Wake Forest University, Winston-Salem, NC
Master of Science in Business Analytics, *May 2027*
Bachelor of Science in Computer Science – Minors in Mathematics and Psychology, *May 2026*
Honors: Dean's List

AREAS OF EXPERTISE

Machine Learning | Predictive Modeling | Regression Analysis | Deep Learning | Feature Engineering | Statistical Inference
Data Cleaning | Data Visualization | Statistical Analysis | Hypothesis Testing | Stakeholder Communication | Leadership
Problem-Solving | Decision Making | Attention to Detail | Active Listening | Adaptability | Time Management | Ambitious Learner

TECHNICAL SKILLS & CERTIFICATIONS

Programming Languages: Python, SQL
Machine Learning & Modeling: PyTorch, TensorFlow/Keras, Linear Regression, Feature Selection, Cross-Validation, Transfer Learning, Model Calibration, Expected Value Modeling
Data Analysis & Visualization: Excel (Pivot Tables), Power BI, SQLite
Certifications: LinkedIn Learning: SQL Essential Training, Power BI Essential Training

PROFESSIONAL & LEADERSHIP EXPERIENCE

Wake Forest University

GRADUATE CONSULTANT | EASTRIDGE ANALYTICS LLC — *Oct 2026 – Present*

- Partner with Eastridge Analytics through the Wake Forest MSBA program on a client engagement supporting Bridgr, a platform that connects data across the systems teams already use
- Design an AI benchmark comparing Bridgr against plain Claude Code and Claude Code with business context on usage and cost, accuracy, and response time, and assess UI/UX improvements to the platform

FOUNDER | ARTIFICIAL INTELLIGENCE CLUB — *Oct 2024 – May 2026*

- Founded and led a 15-member student organization focused on AI concepts and applications, coordinating weekly meetings, guest speakers, and a faculty-advised technical research project
- Directed a faculty-advised research initiative building a patch-based feedforward neural network in TensorFlow/Keras, achieving 76% test accuracy and 0.74 weighted F1 on 4-class lung infection segmentation from CT imagery despite severe class imbalance

PRESIDENT | KAPPA ALPHA PSI — *Apr 2025 – May 2026*

- Led strategic initiatives and operational oversight for the chapter, collaborating closely with the executive board and members of other organizations to align fundraising and community service efforts with organizational goals

RESIDENT ASSISTANT — *Aug 2025 – May 2026*

- Served as a point of contact for 34 students, applying structured conflict resolution and problem-solving processes to address interpersonal community issues

ANALYTICAL PROJECT EXPERIENCE

Nashville Airbnb Price Prediction Model: Built a linear regression model on log price using 8,171 Nashville Airbnb listings to predict nightly rates and isolate the property, host, and location factors that drive them. Engineered features including distance from Lower Broadway and amenity flags, then narrowed 66 candidate predictors to 34 using F-tests and cross-validated stepwise selection. Validated assumptions with Breusch-Pagan, Durbin-Watson, VIF, and influence diagnostics, and confirmed results held after removing the most influential listings. Achieved 0.61 test R^2 with a $117 mean absolute error per night. Found that hot tubs add about 17% to price, a skyline view about 10%, and listings 5 to 10 km from downtown price about 14% lower.

NBA/WNBA Player Props Prediction System: Built a PyTorch pipeline processing 70K+ game logs across 50+ engineered features to predict 6 stat categories (PTS, REB, AST, BLK, STL, FG3M) for 470+ tracked players. Pulled real-time player prop odds, via The Odds API, across 4 markets applying head-to-head feature engineering and calibration offset tuning to improve prediction reliability. Applied EV-based bet filtering to isolate high-edge wagers, achieving a 56.7% win rate versus 44.7% on low-edge bets and a 52.4% breakeven threshold, confirming the model's edge signal was statistically meaningful rather than noise.

Airbnb Pricing Intelligence Dashboard: Cleaned 7,467 raw listings in Excel, then built a SQL (SQLite) transformation layer with window functions and subqueries feeding a 3-page Power BI dashboard across 35 districts. Found that professional hosts (6+ listings) command a ~32% price premium over individual hosts and skew toward High-tier listings at nearly twice the rate
