DATA ANALYST

Wake Forest MSBA candidate with a Computer Science foundation and hands-on experience cleaning and analyzing data. Built end-to-end data pipelines using Excel cleaning, SQL engineering, and Power BI dashboarding to turn raw datasets into pricing intelligence dashboards and predictive models. Brings a full-stack analytics skill set that helps companies turn complex data into confident, data-driven decisions.

EDUCATION

Wake Forest University School of Business, Winston-Salem, NC

Master of Science in Business Analytics, May 2027

Wake Forest University, Winston-Salem, NC

Bachelor of Science in Computer Science – Minors in Mathematics and Psychology, May 2026

Honors: Dean's List

AREAS OF EXPERTISE

Leadership | Program Development | Team Building | Machine Learning | Problem-Solving | Collaboration | Data Visualization | Deep Learning | Statistical Analysis | Relationship Building | Crisis Management | Event Planning | Adaptability | Communication | Attention to Detail | Situational Awareness | Decision Making | Resilience | Time Management | Active Listening | Desire to Learn

TECHNICAL SKILLS & CERTIFICATIONS

Programming Languages: Python, SQL

Data Analysis & Visualization: Excel, Power BI

Analytical Software & Tools: Database Management: SQL Lite

Machine Learning: PyTorch, Transfer Learning, Model Calibration

Predictive Modeling & Statistical Analysis: Feature Engineering, Probability Calibration / Expected Value Modeling

Certifications: LinkedIn Learning: SQL Essential Training, Power BI Essential Training

PROFESSIONAL & LEADERSHIP EXPERIENCE

Wake Forest University

RESIDENT ASSISTANT

Aug 2025 – May 2026

- Served as a point of contact for 34 students, applying structured conflict resolution and problem-solving processes to address interpersonal community issues
- Planned and facilitated recurring educational and community programs in coordination with housing staff and campus partners, strengthening student engagement across the residential community

FOUNDER | ARTIFICIAL INTELLIGENCE CLUB

Oct 2024 – May 2026

- Founded and led a 15-member student organization focused on AI concepts and applications, coordinating weekly meetings, guest speakers, and a faculty-advised technical research project
- Directed a faculty-advised research initiative building a patch-based feedforward neural network in TensorFlow/Keras, achieving 76% test accuracy on 4-class lung infection segmentation from CT imagery despite severe class imbalance.

PRESIDENT | KAPPA ALPHA PSI

Apr 2025 – May 2026

- Led strategic initiatives and operational oversight for the chapter, collaborating closely with the executive board and members of other organizations to align fundraising and community service efforts with organizational goals
- Enhanced chapter visibility and community engagement through leadership of fundraising and service projects, fostering a culture of collaboration and consistent member participation

ANALYTICAL PROJECT EXPERIENCE

Airbnb Pricing Intelligence Dashboard: Cleaned and structured 7,467 raw listings records in Excel, then engineered a SQL (SQLite) transformation layer using aggregation views, window functions (RANK), and subqueries to segment districts by sample reliability and price tier. Built a Power BI dashboard revealing a 3-tier pricing structure across 35 neighborhood districts, with district-level breakdowns showing that top-priced districts derive their high averages from a mix of medium- and high-tier listings rather than uniformly luxury inventory. Flagged 12 thin-sample districts (fewer than 35 listings) to prevent misleading neighborhood-level price comparisons.

NBA/WNBA Player Props Prediction System: Built a PyTorch pipeline processing 70K+ game logs across 50+ engineered features to predict 6 stat categories (PTS, REB, AST, BLK, STL, FG3M) for 470+ tracked players. Pulled real-time player prop odds, via The Odds API, across 4 markets applying head-to-head feature engineering and calibration offset tuning to improve prediction reliability. Applied EV-based bet filtering to isolate high-edge wagers, achieving a 56.7% win rate versus 44.7% on low-edge bets and a 52.4% breakeven threshold, confirming the model's edge signal was statistically meaningful rather than noise.
